

EXECUTIVE POSITIONING AUDIT

48H ASYNCHRONOUS TEARDOWN & REVISED NARRATIVE ARCHITECTURE

CLIENT (ANONYMIZED)	TARGET AUDIENCE	AUDITOR & TURNAROUND
Alex D. Founder & CEO @ [Series A Cloud Infra SaaS]	Enterprise VP of Eng, CTOs & DevOps Directors (\$20M-\$100M ARR)	Adrian M. Peticila Delivered in 48h · Asynchronous

CURRENT POSITIONING SCORE	PRIMARY REVENUE BOTTLENECK	MARKET PERCEPTION
3.5 / 10 High ambiguity · Low conversion	Company-Shielding Zero personal point-of-view	Interchangeable DevTool Lost in noisy Kubernetes ecosystem

01. Executive Diagnosis: Why Your Current Presence Fails

You have built a genuinely impressive telemetry engine with \$1.4M ARR and top-tier seed investors. Yet on LinkedIn and in executive backchannels, you are virtually invisible. Worse: when an Enterprise CTO visits your profile after a sales pitch, your profile reads like an unpaid company product catalog, not the profile of an authoritative category creator.

The Core Asymmetry: Your product saves engineering teams 40 hours per month on incident triage. But your personal positioning makes you sound like a junior engineer begging for feature feedback. Enterprise buyers do not buy mission-critical infrastructure from polite tool-builders. They buy from founders who clearly diagnose their bleeding operational wounds.

THE HARD TRUTH: You are treating LinkedIn as an afterthought broadcast channel for release notes. That is costing you qualified inbound pipeline. When founders lack a sharp point of view, prospects default to comparing them on price and feature checklists.

02. The Top 3 Brand Killers

These are the 3 structural failure points actively suffocating your authority and inbound demand:

FAILURE POINT #1: The 'Feature Soup' Headline Trap

Your current headline: *'Founder & CEO at TelemetryHQ | Building next-gen eBPF observability | Ex-Google | Cloud Native Enthusiast | Open Source Contributor | Speaker'*

The Diagnosis: You have crammed six distinct identities into one line. When you say you are everything, the enterprise buyer remembers nothing. A VP of Engineering does not care that you are a 'Cloud Native Enthusiast'. They want to know what expensive fire you extinguish in their infrastructure.

FAILURE POINT #2: Company-Shielding Syndrome

The Diagnosis: Every post you publish uses 'We' instead of 'I'. You post links to blog posts with corporate headlines like *'Check out our latest update on kernel tracepoints'*. You hide behind your corporate logo. In B2B tech, corporate pages get algorithmic penalties and zero emotional engagement. People follow founders with convictions, not company megaphones.

FAILURE POINT #3: Algorithmic Politeness & Zero Polarization

The Diagnosis: Your posts are so polite and consensus-driven that they could have been written by ChatGPT in 2023. You celebrate funding rounds, thank event organizers, and praise industry trends. You take zero risks. Authority is forged at the edge of controversy: what does your entire industry get completely wrong that you know to be true?

WHERE YOU ARE TODAY (COMMODITY)	WHERE YOU MUST MOVE (AUTHORITY)
• Headline reads like a keyword resume • Content is 90% company feature announcements • Passive tone; waits for prospects to stumble in • Perceived as one of 40 observability startups	• Headline states 1 sharp commercial claim • Content explains operational failures in telemetry • Direct, contrarian stance on Datadog bill bloat • Perceived as the single expert on eBPF efficiency

03. The Revised Narrative Spear

Your new positioning centers on one undeniable enemy: **The Silent Tax of Telemetry Bloat**. Instead of competing on eBPF buzzwords, you plant your flag as the builder who liberates engineering budgets from legacy observability extortion.

04. Line-by-Line LinkedIn Rewrites

Deploy these exact rewrites immediately to reposition your personal profile:

REVISED HEADLINE (READY TO DEPLOY)

Cutting 70% of observability cost without dropping a single trace. Founder & CEO @ TelemetryHQ · 12 yrs in distributed systems · Writing about the end of bloated APM bills.

REVISED ABOUT SECTION (HOOK & PIVOT EXCERPT)

Every VP of Engineering I speak with has the exact same nightmare: their Datadog invoice grew 4x faster than their revenue.

They know half of their collected metrics are never queried. But they are terrified to turn off agents because the next production outage might happen in the dark.

I spent 6 years at Google and built infrastructure handling 2M requests/sec. I started TelemetryHQ because legacy APM pricing is broken by design: you are penalized for growing your infrastructure.

Here is what we do differently: we use kernel-level eBPF instrumentation to filter, aggregate, and route high-fidelity traces at the edge. You get instant root-cause diagnosis at one-third of the storage cost.

If your team is spending more time debating cloud monitoring invoices than shipping product, send me a DM or check our open-source benchmarks below.

05. The 3 Editorial Content Pillars

Stop posting generic updates. Rotate between these 3 pillars to build category authority:

PILLAR 1: The 'Invoice Breakdown' (Proof)	Deconstruct real, anonymized AWS/Datadog bills. Show where the hidden 300% markup sits. <i>Signals: Financial empathy and deep architectural mastery.</i>
PILLAR 2: The 'Kernel Truth' (Technical Moat)	Bite-sized visual explainers of eBPF vs legacy user-space agents. Zero marketing jargon. <i>Signals: Unassailable founder competence and engineering depth.</i>
PILLAR 3: The 'Incident Post-Mortem' (Tension)	Dissect public outages (CrowdStrike, Cloudflare) and highlight exactly why traditional dashboards failed. <i>Signals: Urgent relevance and real-world survival skills.</i>

06. Immediate Action Plan (Monday Morning)

STEP 1 (15 MIN)	Deploy the new Headline & About section directly to your LinkedIn profile. Remove the laundry list of generic titles.
STEP 2 (30 MIN)	Replace your Featured Section links. Swap out the generic homepage link for: (1) An architectural benchmark PDF, (2) Your top-performing technical breakdown post.
STEP 3 (60 MIN)	Draft your first 'Invoice Breakdown' post using the Pillar 1 template. Take a stand on monitoring costs and pin it to your profile.

WANT THE COMPLETE REBUILD EXECUTED FOR YOU?

The Personal Brand Audit gives you the exact diagnosis and initial rewrites. If you want the complete end-to-end positioning document, full LinkedIn overhaul, and 30 ready-to-publish executive posts written in your authentic voice, explore **The Monster Job (€2,500)** or the **Brand Positioning Sprint (€499)** at [aah.monster](#).
